

X-ident technology GmbH

Starting as a RFID working group of the company Sihl in the mid 1990's the company was one of the first fully RFID dedicated companies in this market. Based on the broad knowledge in paper, film and adhesives HF expertise the first baggage tags were produced for the airline industry. Several field tests in various application followed and the first sales of smart labels, tickets and tags as well. X-ident's core business is the lamination of transponder inlays into flexible materials. The well known and proven 13.56 MHz technologies has been supported since the first steps in RFID. Furthermore millions of UHF inlays have been converted for the US market working at 915 MHz. Since there will be some movement in European power regulations the first smart labels for 868 MHz have been converted too. This provides a deep technological and application knowledge to serve our customers with the best performing products sold worldwide under the brand of IQ-Paper®.

In 2002 X-ident technology became member of the Austrian Trierenberg group, one of the world leading companies for special papers.

X-ident is represented all over the world by it's US subsidiary, own sales reps and partners.

You're welcome to take a look at our website at www.iq-paper.com to find out more about X-ident technology and its products.
